SUMMARY

Full-Stack Developer with 3+ years of experience building and shipping responsive web apps with React.js, React Native, Node.js, and TypeScript. Experienced in startup environments, shipping end-to-end products.

EDUCATION

- **University of Ottawa** Ottawa, Canada
Master of Computer Science (Incoming) *Jan. 2027 – Jan. 2029 (Expected)*
- **Oregon State University** Oregon, U.S.
B.S. in Applied Computer Science; GPA: 3.39/4.0 *Sep. 2018 – Jun. 2023*

EXPERIENCE

- **Reloop (Lby Limited)** Vientiane, Laos
Lead Full-Stack Engineer *June 2026 – December 2026 (Expected)*
 - **Two-sided marketplace:** Built Reloop and Reloop Partner as separate Expo apps (plus a Next.js marketing site) for surplus food pickup in Vientiane. Solo on engineering for a private beta of about 40 mixed testers; no failed reserve-to-pickup paths reported so far.
 - **Last-bag oversell:** Stopped two customers from claiming the same last surplus bag by reserving stock inside a Postgres transaction (row locks + hold expiry that puts inventory back if payment never finishes).
 - **Paid only from the server:** Running real LAK bank-QR checkouts in sandbox today: customers upload proof, but only a server-side confirm can mark an order paid, the phone app cannot flip the status.
 - **One login, two apps:** Same Supabase account works in both apps, but store tools stay locked behind partner membership and approval (RLS), with separate Google/Apple/email redirect URLs per app.
- **Mudita Hospital** Yangon, Myanmar
Sole Full-Stack Developer *September 2026 – October 2026*
 - **Clinic system on LAN:** Replaced paper daily reports and a patchwork of tools with an offline Windows app used at three clinic desks, processing about 100–200 OPD and pharmacy bills a day (Go, SQLite, React/Tauri).
 - **One stock pipeline:** Tied OPD, OT case-cart, and pharmacy into one inventory path so a voided bill puts the exact medicine batches back instead of leaving stock and cash out of sync.
 - **Multi-desk safety:** Kept totals and stock correct when desks billed at the same time using transactional pay/issue paths and SQLite WAL, not optimistic UI updates.
 - **Handoff without cloud:** Shipped installers, auto-restart for the API, scheduled backups, EN/Myanmar UI, and receipt printing so the clinic could run without me on site.
- **Oregon State University** Portland, OR
Lead Web Developer *June 2024 – July 2026*
 - **Event Management System:** Led development and maintenance of the EECS event system for 39 university events and 2,100+ student participants, including career fairs, graduation ceremonies, and technical workshops.
 - **Applications and Integrations:** Built event registration portals, CRM integrations, and internal job and résumé systems. These efforts contributed to a 14% increase in student engagement, while webinar production grew from 28 to 41 events year over year.
 - **Reporting and Analytics:** Built dashboards for registration tracking and web analytics, with filtering and CSV/PDF exports to help departments monitor events and review results.
- **eNotebook Startup** Corvallis, OR
Co-Lead Full-Stack Developer *August 2023 – June 2026*
 - **Multi-Tenant SaaS:** Co-led development of a SaaS platform using React, Flask, and AWS EC2/S3, implementing tenant-aware backend logic to keep customer data separated.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Go, SQL, Python, PHP

Frameworks & Libraries: React, React Native (Expo), Next.js, Flask, Tailwind CSS

Databases & Backend: PostgreSQL, SQLite, Supabase, REST APIs

Cloud & Tools: AWS (EC2, S3), Git, Tauri
